## Global Warming

“In the summer of 2016 a tsunami engulfed southern China that led to severe flooding and the temporary closure of industry for the region. The vast pollution cloud that loomed without hesitation for years dissipated. It was reported at that time that five year old children had seen blue sky for the first time in their lifetimes.”

We all know Global Warming as a growing worldwide crisis . I have heard various plans to fight climate change from lawmakers and candidates that include a "Carbon Tax' and restrictions on production in industries across the board for companies in this country.

The Green New Deal, a bill that passed the US House of Representatives and defeated in the Senate, would have closed all airports in the US and ended the use of fossil fuels throughout every facet of this country's economy, including industry, travel and consumer use. The Green New Deal would have reduced this country from its Super Power Status, impoverished and restricted its people and been to the severe detriment of Global Warming and our society.

“In the summer of 2016 a tsunami engulfed southern China that led to severe flooding and the temporary closure of industry for the region. The vast pollution cloud that loomed without hesitation for years dissipated. It was reported at that time that five year old children had seen blue sky for the first time in their lifetimes.”

None of the above addresses the true culprit of this decade. Countries such as India, China, Mongolia and Kazakhstan currently emit enormous quantities of hazardous toxins into the air that encompass and en-cloud vast regions of each of their countries.

photos of Earth from space were filmed by the International Space Station seven months ago and may be found at: <https://video.search.yahoo.com/search/video?fr=mcafee&p=view+of+earth+from+space#id=24&vid=855286b3a644eb96a49c6f0147192628&action=view>

In the US, consumers flock to purchase the electric and hybrid auto. In 2018 the number one selling care was the Tesla 3, number two: the Toyota Prius. In fact, for every of the top ten cars sold in the US for that year, each were either a zero emission or hybrid vehicle. In fact, sales of Zero Emission cars grew 81% for 2018 from 2017.

Note today's air pollution as presented by Berkeley Earth. The United States is far from the primary culprit of air pollution and Global Warming.

In the summer of 2016 a tsunami engulfed southern China that led to severe flooding and the temporary closure of industry for the region. The vast pollution cloud that loomed without hesitation for years dissipated. It was reported at that time that five year old children had seen blue sky for the first time in their lifetimes.

Now that unrelenting pollution cloud has re-emerged.

With the earth's temperatures reaching a critical level, immediate action is necessary.

Pollution clouds over the Arctic and Anarchistic need to be reduced drastically and removed over a designated period. A third pollution cloud over southern China and India needs to be reduced drastically and removed. The world needs to clean up our mess.

Foreign countries also need to modify their standards and procedures dramatically. The centralized power structure of China, Kazakhstan and other countries would allow for swift and immediate action.

This country's industries emerged into the 20th century with a framework of responsibility. Our Democracy has made environmental responsibility and accountability necessary for manufacturing to exist.

### Plan to Reverse the Trend of Global Warming

- Clean Up the Arctic and Antarctic Pollution Clouds. Those clouds act as a blanket that keeps in warm air, and are the apparatus that is making the Earth warmer. The earth's rotation made for their accumulation at the poles, as the movement is similar to a centrifuge.
- A third cloud is severely detrimental to this planet's climate. A third blanket exacerbates this problem dramatically and needs to be addressed immediately.
- Our Government needs to coordinate our environmental specialists and engineers with the governments of China, India, Kazakhstan and Mongolia to develop immediate solutions.

As for the plans of some lawmakers and Presidential candidates to combat Global Warming, here, in the US with the Green New Deal, taxes and restrictions I am opposed.

For the record: I oppose the Carbon Tax. restricting US industry and the Green New Deal.

The Carbon Tax penalizes Americans, many of whom have been happy to do their part, either with a new hybrid/electric vehicle, pellet or wood heating systems, or with recycling. Emission standards throughout industry in the country have also been achieving some stellar results. Carbon emissions in the US have declined 59% from 2000 to 2018, according to the EPA. (<https://www.epa.gov/air-trends/air-quality-national-summary>)

Keep in mind that people in this country have emerged in a society regulated by a government that fostered an infrastructure that necessitated the use of a combustible engine, home heating system fueled with heating oil, also products manufactured with fossil fuels, etc.

Keep in mind that people in this country have emerged in a society regulated by a government that fostered an infrastructure that necessitated the use of a combustible engine, home heating system fueled with heating oil, also products manufactured with fossil fuels, etc.

The Carbon Tax is also inflationary and really doesn't address the problem. With higher prices and fewer spendable dollars, consumers will be less likely to shift to wood based heating systems or buy that electric car!

The Carbon Tax, to me, appears to be an excuse to bring in tax dollars.

Keep in mind that, for 2019, the Federal Budget is in the red by approximately \$680 billion. That \$680 billion overage may be due to the inclusion of Paid Parental Leave that costs \$709 for 2018 (was funded last year) and 2019. For 2020 Paid Parental Leave will cost \$2.6 trillion. I would like a strike-through for the entry and Paid Parental Leave removed from funding entirely.

While FASFA is now funded with \$314 billion, increased from \$81 billion in 2018, and should allow B students college entry to the institution of their choice, HUD remains closed and the Federal Government is, once again in the red. Don't forget that looming US Treasury Debt now at \$23 Trillion.

There is work to be done.
